COURSE DESCRIPTION
This course offers an overview of Earth's climate system by describing the major climatological features in the atmosphere and oceans and by explaining the physical principals behind them. The course begins with an introduction of the global energy balance that drives motions in the atmosphere and oceans, then describes the basic structures and general circulations of the atmosphere and oceans, and finally look into major climate change and variation phenomena.

TEXTBOOKS
“Understanding Weather and Climate”, by Aguado and Burt, Prentice Hall.
“Regional Oceanography: An Introduction”, Tomczak & Godfrey, online.
“Climatology: An Atmospheric Science”, Oliver and Hidore, Prentice Hall.

GRADES: Homework (40%); midterm (60%)

HOMEWORKS: Issue and due every Thursday

SYLLABUS

Week 1 09/27,10/02,10/04  Global Energy Balance
Atmosphere Composition; Planetary Energy Balance
Greenhouse Effect; Role of Cloud

Week 2 10/09* & 10/11  Atmospheric General Circulation
*(no class on 10/09)
General Circulation in the Troposphere and Stratosphere
Jetstreams; Walker Circulation
Monsoon, Sea-land Breeze, Santa Ana Wind

Week 3 10/16 & 10/18  Oceanic General Circulation
Ocean Structure; Mixed layer, Ekman Layer, and Thermocline
Water Mass Formation, Ekman Pumping, and Subduction
Surface Ocean Circulation: Wind-Driven
Deep Ocean Circulation: Density-Driven
Pacific Ocean, Atlantic Ocean, and Indian Ocean
Cryosphere

Week 4 10/23 & 10/25  Climate Change and Variability
Past Climate Changes
El Niño Southern Oscillation; Arctic Oscillation; Ozone Hole

Week 5 10/30 & 11/01  Weather; Satellite Observations
Air Masses, Fronts; Major High and Low Pressure Systems
Mid-Latitude Cyclones; Tropical Hurricane
Satellite Observations

Midterm 11/09 (Friday)
# Earth System Science 200a: Earth System Climatology (Fall 2007)
(http://www.ess.uci.edu/~yu/ess200a.html)

**Professor Jin-Yi Yu**  
CH3315, 824-3878, jyyu@uci.edu

**Tuesdays & Thursdays 9:00-10:20, CH1103**

## COURSE DESCRIPTION
This course offers an overview of Earth's climate system by describing the major climatological features in the atmosphere and oceans and by explaining the physical principals behind them. The course begins with an introduction of the global energy balance that drives motions in the atmosphere and oceans, then describes the basic structures and general circulations of the atmosphere and oceans, and finally look into major climate change and variation phenomena.

## TEXTBOOKS

- "The Earth System", Kump, Kasting & Crane, Prentice Hall.
- "Understanding Weather and Climate", by Aguado and Burt, Prentice Hall.
- "Regional Oceanography: An Introduction", Tomczak & Godfrey, online.
- "Climatology: An Atmospheric Science", Oliver and Hidore, Prentice Hall.

## GRADES
- Homework (40%); midterm (60%)

## HOMEWORKS
- Issue and due every Thursday
